## Summary

A results-oriented AI/Fullstack Engineer focused on building robust, AI-powered solutions. My focus is on understanding the fundamental trade-offs of technologies to solve real-world problems. I am committed to rapid prototyping and the practical engineering required to build, validate, and maintain reliable systems, with a strong eagerness to learn and apply Generative AI.

---

## Technical Skills

- Programming Languages: Java, JavaScript, Python
  - Backend: Node.js, Express, MySQL, PostgreSQL, MongoDB
  - Frontend: React, HTML, CSS, Tailwind CSS
  - AI & Prototyping: Figma, Google AI Studio, Prompt Engineering, LangChain, Firebase Genkit
  - Developer Tools: Git, Postman, Jest, Render, Vercel, Netlify
- 

## Experience

### Freelance QA Intern *Collaborative Freelance Team April 2025 – June 2025*

- Worked with a team of freelancers as part of the QA team for a client project.
  - Gained hands-on exposure to fundamentals of Quality Assurance (QA) and Test-Driven Development (TDD) practices.
  - Involved in functional testing, bug reporting, and debugging technical issues across the stack.
- 

## Projects

### Google Gen AI Hackathon *June 2024*

- Secured a top 5 position for innovative problem-solving using Generative AI.
- Collaborated with a team to rapidly prototype and develop a functional AI-integrated application.
- Leveraged Prompt Engineering techniques and Google AI Studio to build the prototype.

**RAG mini project:** Python, FastAPI, FAISS, Sentence-Transformers, geminiApi Built a document retrieval and Q&A system that processes pharma PDFs/DOCX, generates embeddings, and answers user queries with cited references using RAG architecture.

**E-commerce Website (GvPcWorld)** *Technology: React, MongoDB, Node.js, Express, CSS*

- Designed and built a full-stack web application for users to buy and customize PC components.
- Developed a RESTful API using Node.js/Express for robust profile management and product handling.
- Implemented data modeling and DB Schema design for the NoSQL database (MongoDB).

[AI wrapper for this project](#)

**Finding Dora** *Technology: HTML, CSS, JavaScript*

- Developed a game featuring a score calculation system, timer, and sound effects integration.

**Java OOP Project** *Technology: Java*

- Applied core object-oriented design principles to solve a complex problem, including data modeling for a console-based application.

---

Education

**JECRC** | Jaipur, Rajasthan B.Tech, Computer Science (Software Product Engineering) *Expected Graduation: 2027 (In association with Kalvium's UG program)*
